# Presents:

_iMIS_¹⁵ **_wv_Multi-Instance**

Multi-Instance table display and editing for Public and Casual Web View Users

The **_wv_Multi-Instance** allows Web View users to create and edit any **_iMIS_** user defined multi-instance table. **_wv_Multi-Instance** consists of Simple and Expanded editors, providing the interface for a variety of multi-instance panel types from multiple tables on a single page. Creating and adding fields is easy and completed using standard **_iMIS_** tools.

_wv_Multi-Instance:

- Uses standard **_iMIS_** multi-instance user defined tables
- Displays in **_iMIS_** using standard **_iMIS_** tools.
- Obeys role-based security
- Provides view and edit security at the field level
- Allows fields from multiple tables to appear on the same page.
- Allows creation and edit of user defined field
- Allows long field prompts
- Allows tooltips for every field
- Allows fields to have an ID lookup using IQA queries.
- Allows for calculated, read-only fields.
- Allows descriptions before and after fields for better grouping of fields

_wv_Multi-Instance allows you to empower your users with the ability to use the browser based view of **_iMIS_** and still create and edit multi-instance table user defined fields as they would in **_iMIS_** desktop.

Other iParts currently in the **_wv_Suite** include: **_wv_Activity**, **_wv_Relationships**, and **_wv_FileUpload**.

NOTE: **_wv_Multi-Instance** *requires WCM*
